STOR 151 Spring 2024

Labs 2 and 3

As stated previously for Lab 1, these are "extra credit" assignments using Excel. If you complete all three you will earn up to 5 points extra credit which will be added to you course total before assigning finals grades for the course. If you choose not to do these labs, that is perfectly fine but in that case you won't earn the extra credit.

Instructions: please download the files labelled "Lab 2 Confidence Intervals" and "Lab 3 Hypothesis Testing" from the "Files" directory within canvas. The instructions are all contained within the lab and your submitted solution should be the completed excel file uploaded into the "Assignments" tab on canvas. Do not attempt to submit into gradescope.

Due date: Thursday, April 25 for both assignments.

Note: as of the date of posting this (April 1), we have not yet covered confidence intervals and hypothesis tests for continuous data. However, we will have done that by next week's classes, so you will still have plenty of time to complete these assgnments.

Each Lab will be graded as a single question with a total of 100 points.
